Timestamps are valid, but the flow queue is not in all of the calendar's it needs to be in.

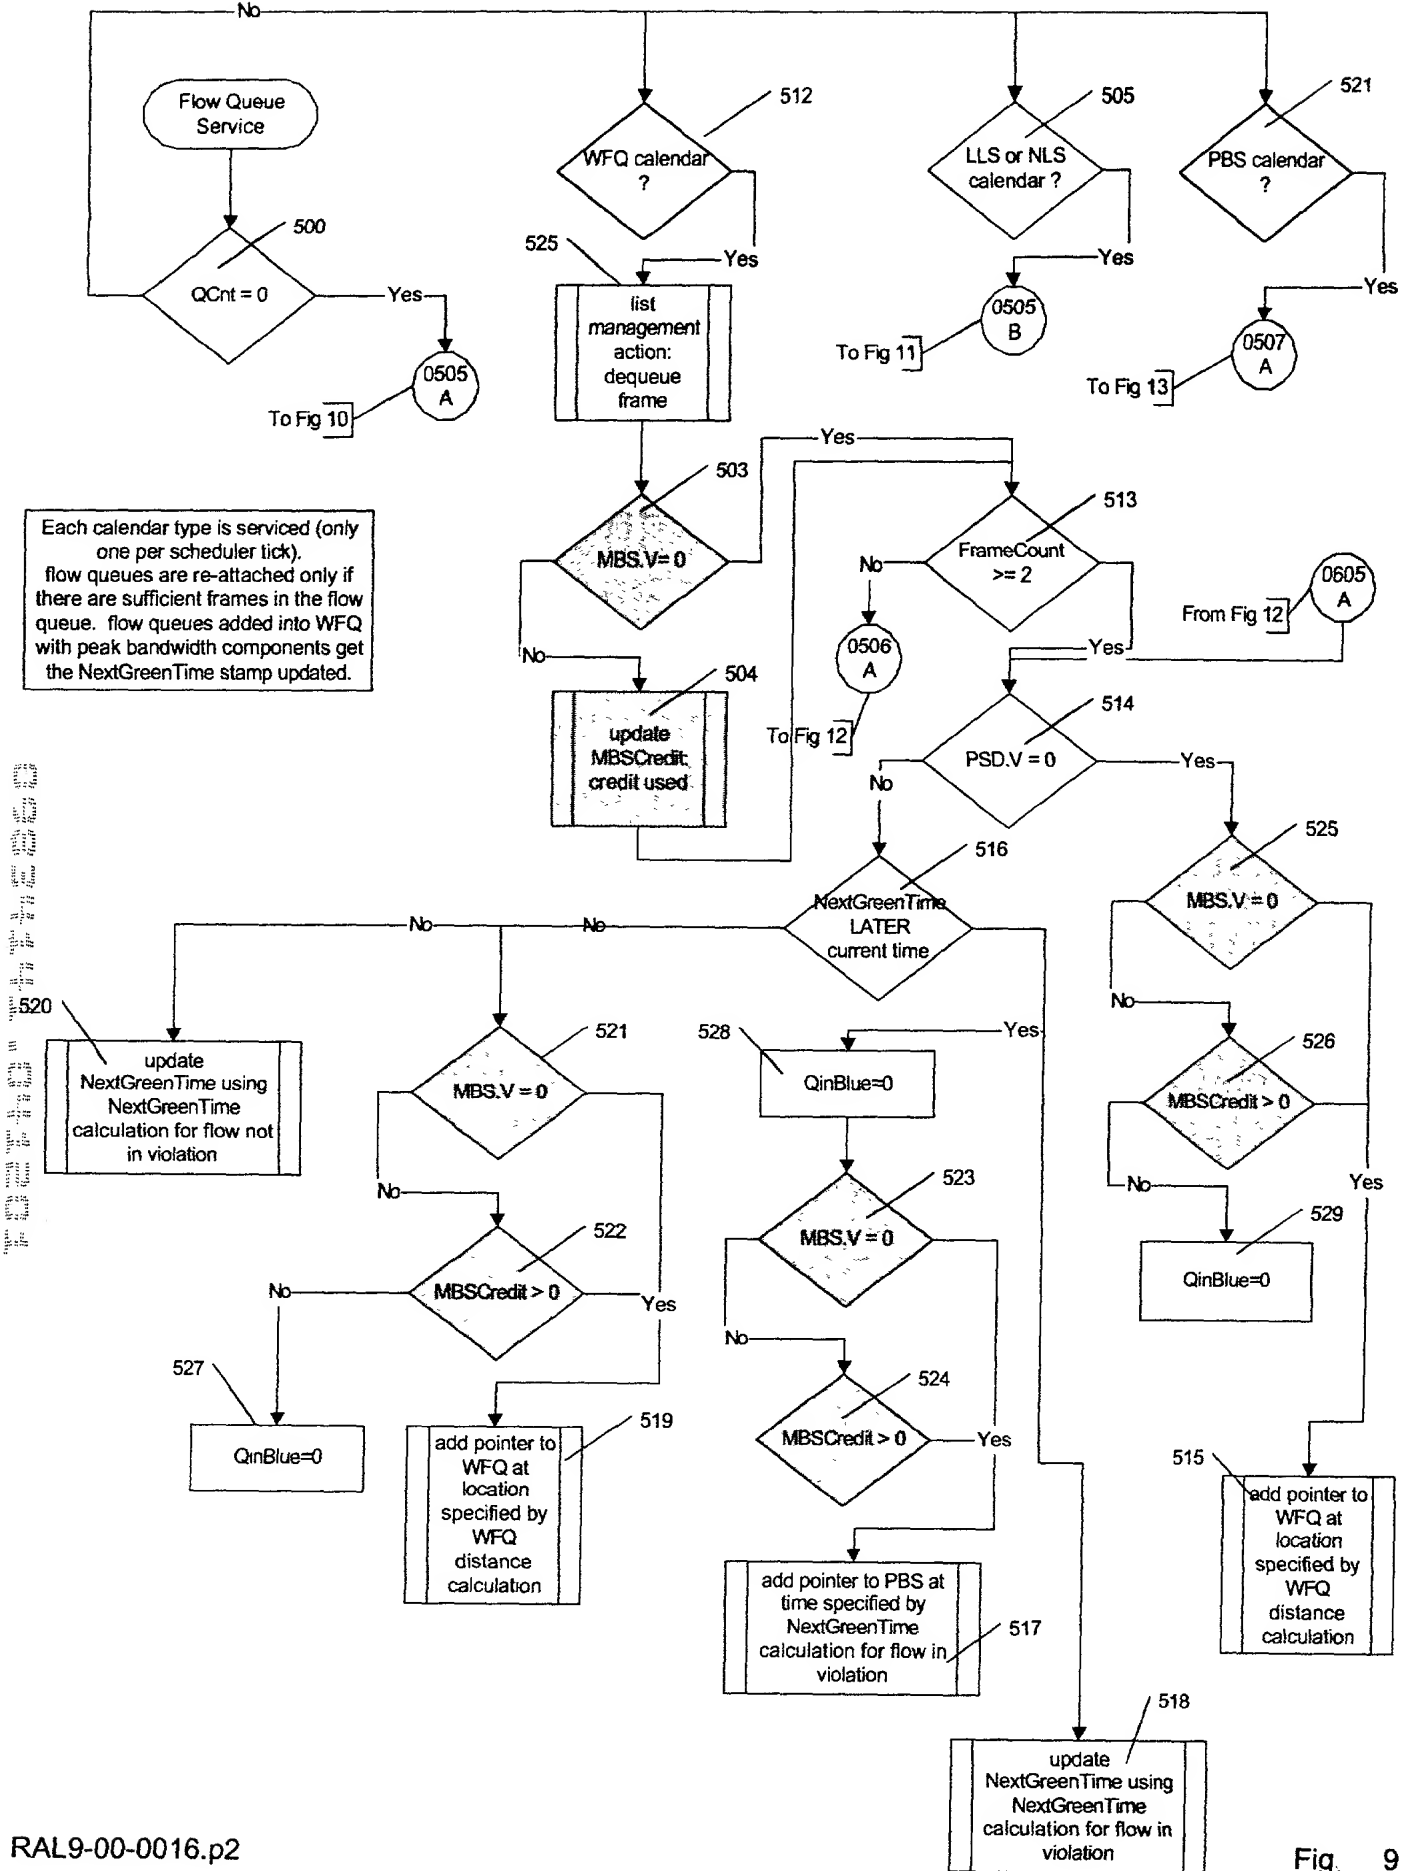

Peak component is not in calendar, there is no minimum bandwidth component

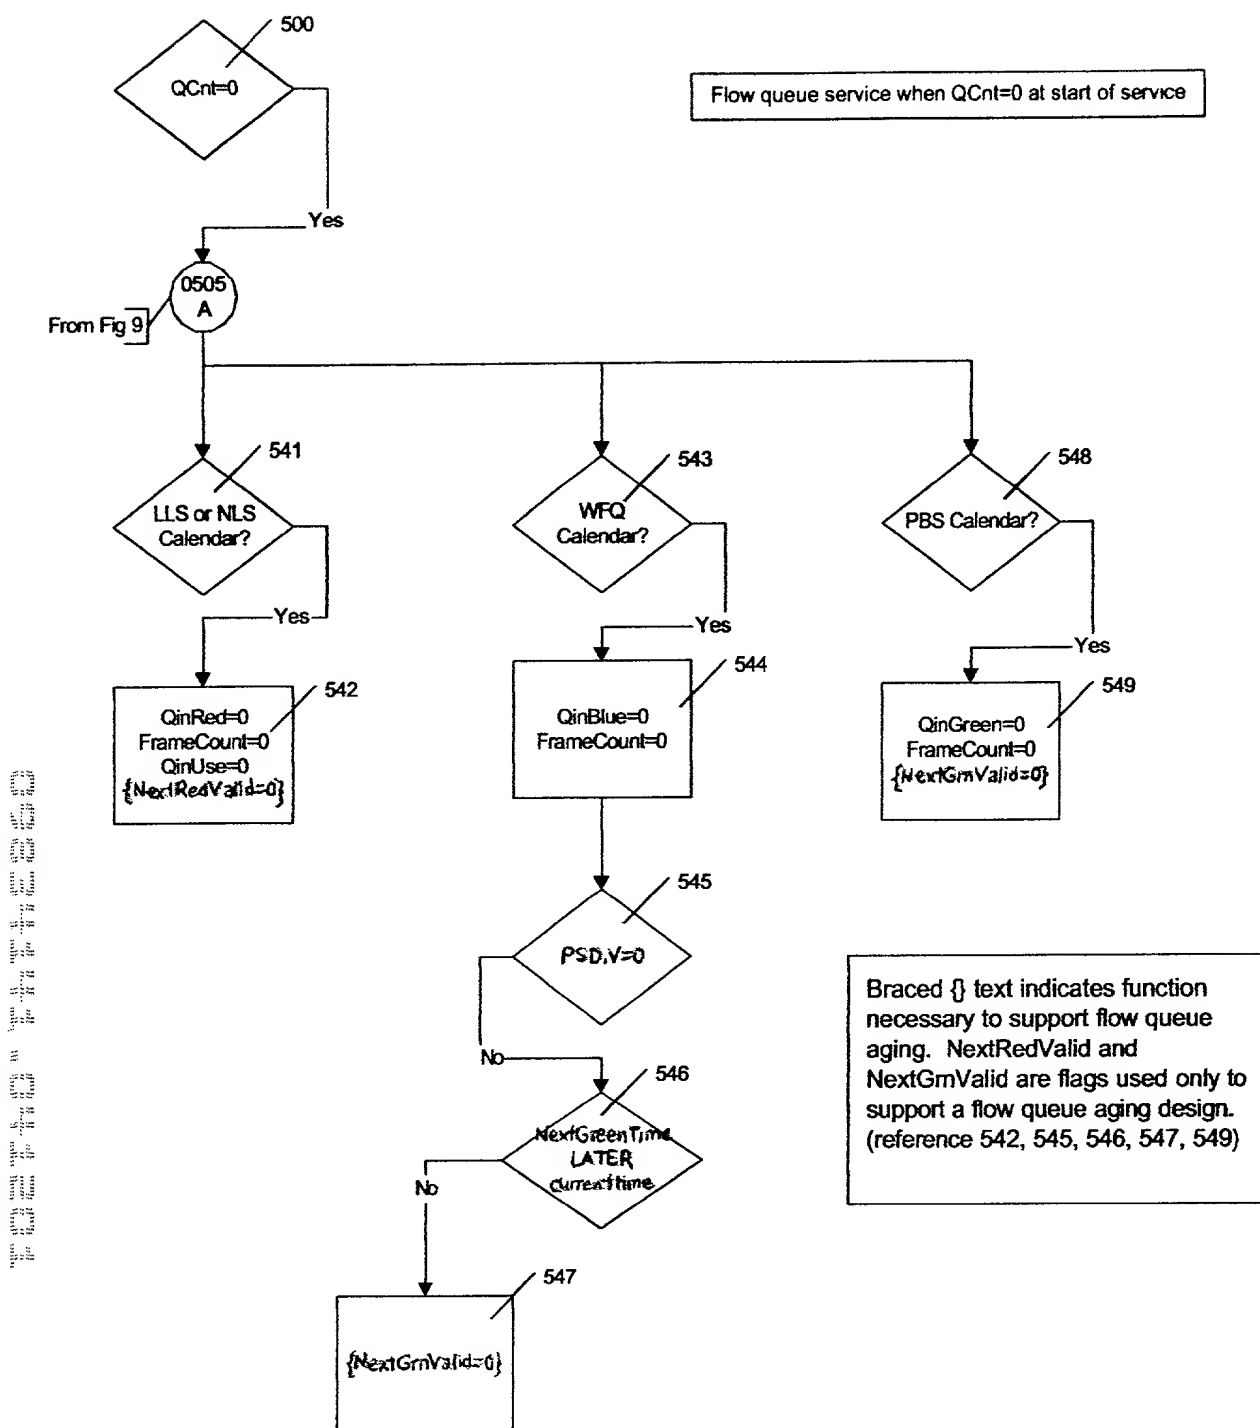

Peak is not in calendar; minimum bandwidth component is in calendar.

Note that NextGreenTime stamp is examined to determine attachment to either WFQ or PBS

If MBS is specified, the MBSCredit is examined and if positive, adding the flow queue to either the WFQ or the PBS is permitted.

WFQ Calendar
 When there is an assured bandwidth component, the flow queue is removed from the WFQ allowing the last frame to be serviced from the NLS/LSS calendar.
 If there is a peak bandwidth component, the NextGreenTime stamp is updated.
